Petroleum Club

Extends Welcome.

The Tulsa Petroleum club is having a dinner Friday night at 9 o'clock for the volunteers who were here to help from Tulsa to the officers' training camp at Camp Logan H. Roots, many of whom are back from France and are the flower of Tulsa's contribution to the war for democracy. There are now here a few of those who are promptly enlisted and who made every man and woman in Tulsa proud of the fact that they were from here, and among them are men who gave up mighty lucrative positions to join the army at the first possible moment.

The guests of the club will include such well known men as Capt. Roger Sherman, Capt. John C. Cleary, Capt. Wright G. Baker, Capt. John Rogers, Capt. Louis E. Roots, Lieut. Jack Porter, Lieut. Homer Gray, Lieut. Joe K. Parker, Lieut. Ray H. Roots, Capt. Ralph H. Henry and Lieut. J. P. Shea and Lieut. C. W. Ferry. The latter, however, is not a member of the delegation that left from here, as he was attending school at an eastern university and struck out for the first officers' training camp and saw real service in France.

The reception Friday night is not for members of the club, but for the friends of the returning soldiers and among those who have made reservations are many who will have seen the inside of the club for the first time. They will be accorded an especial welcome and will be allotted seats in the order in which the reservations are made. There will be a committee of arrangements who will see to it that the evening is a pleasant one for the soldiers and will provide suitable speakers to bid them all welcome.

The price has been set at \$3 per plate, and because the seating capacity of the dining room is limited to about 40, it has been decided to make this a stag affair only. The reservations can be made by calling the club manager at 7227.

Sinclair Line Going Good.

The Sinclair line from the Headland field to Ranger is making rapid progress these days, and will doubtless set records for the largest oil ever taken in a single month in the mid-continent field. Last Saturday there were four gangs at work throwing dirt in record time, as they have all the modern equipment for fast work.

There are 55 miles of pipe on the ground, which incures rapid completion, as it will be laid as far as the ditch is dug. The line is being built by Booth and Phillips, the contractors who made a great record on the Chicago line for the Sinclair people, and a letter from the firm states that they are concentrating all their energy on this work and will have it in running order by June 15th.

The machinery for the pump stations has practically all been shipped and the steel tanks at the Ranger pump station are nearly completed and the work on the foundations at Bowie station is progressing rapidly. The station at Headland will be enlarged and rebuilt at once, and will be equipped with oil burning engines which is the last word in modern economical operation of pipe lines.

News From Dallas.

BY PRENTICE T. MOORE
DALLAS, TEXAS, April 2.—The Ranger pool is extended two miles northwest by John H. Markham's No. 1 Danley which is making 200 barrels in top of the sand at 3,490 feet.

Folsom and Sheffers' No. 1 Colony School acre about a quarter of a mile northwest of the Prairie No. 2 Roper western edge of million feet of gas and 450 barrels of oil at 3,474 feet.

Magnolia Petroleum company is drilling No. 1 St. W. Connellee, deeper, without appreciable increase after two feet of drilling. Well was making 2,600 barrels before deepening.

In the Duke Knowles pool, Comanche county, the Tex-Penn Oil Co. is deepening No. 1 Duke, the discovery well, gas pressure increasing greatly but no increase in oil. Magnolia Petroleum company's No. 1 Odie is making 112 barrels at 2,765 feet. Extending pool 1,000 feet northeast at Burk Burnett, the bridge well across Red river from the pool is drilling dry sand at 1,690 feet, and appears to be a failure. The Thrift No. 2 Bannon, two miles northwest of Burk Burnett hole is a salt water well in Burk Burnett. Horseon.

Northeast of Orlton.

The W. S. McRae No. 1 Hazel Hill farm, in the northwest corner of the northeast of the south east of section 25-19-7 is still making 300 barrels from the Skinner sand, and is an offset to the southeast of No. 1 Noah Timothy, farmed by the same people, located in the southwest corner of the southwest of the northeast of section 25-19-7, which is still making 75 barrels at about six months old. These wells seem to be located on the east slope of a large monocline and have thus the advantage of drainage from the entire slope above. It was likely looking acreage before the McRae wells were started, although it had been condemned by geologists in the early stages of the world. Mr. McRae has a lot of acreage and is bound to make big fortune in that vicinity.

The Perkins Kelly well in the southeast corner of 25-19-7 is spudded.

Prominent Financier in Town.

Judge W. A. Kerr of Minneapolis who is associated with Captain Getty in the Minnesota Oil company, and is secretary of that concern, is in town and has been inspecting the properties of the company and has doubtless seen much to his liking, as they are among the most fortunate of any new day.

Cowley County, Kansas.
